

Moolet Recent Visitors Grid

Contributed by Brian Williford

Moolet Recent Visitors Module for Joomla! 1.1x displays the most recent users avatar in a grid using MooTools AJAX with periodical that updates the grid without page reloads.

The avatars of the last preset number of folks that have logged into your website are displayed and moved around as new members log in and others log out. The number of members in the grid is selectable along with image display size, target of the profile link and choice of MooTools effects.

Unlike the moolet users online module this module block does not remove the visitor from the grid once their login sessions has timed out. New sessions just push the older ones down the grid but leaves the grid full. Even if all members are gone at the time you hit the site.

This module updates the Avatars in real time and requires Community Builder as that is the origin of the user avatars.

Updated 01/26/2009 :: Added a filter for removing members that only chose your gallery avatar instead of taking the time to upload an original image.

This modules requires Community Builder as that would be where user avatars are tracked in Joomla.

Like all Moolets this module as stunning affects.

- Can slide down from top or slide sideways from the left
 - Image fades away upon load and brightens on rollover
- Module comes with many easily adjustable features:
- Number of Avatars, height, width and so on
 - CSS controls to ajust to your template

Moolet Administration Paramters:

Module Class Suffix
 Path to Joomla Modules
 Path to Moolet CSS File
 Path to Mootools JS File
 Include Internal CSS
 Include Mootools JS File

Mootools Dom Event
 Use Get or Post
 Mootools Wait
